EVOLUTION that needs REVOLUTION

Jyoti R

A visit to a museum on Natural History, with my kids enlightened me on every living being's *evolution* from a single cell & that included our species too. It showed us through pictures & presentations the various stages we passed across billions of years, to become the modern day humans & *according to scientists, our evolution process is more or less, complete! But is that truly so?* Physically, maybe yes but when it comes to other parameters, at-least us Indians have a long way to go I believe. I would back my statement up by pointing to one of the biggest but unfortunate incidents that brought 2012 to a close, the case that has been much talked about, much discussed & the mere mention of which fills every thinking "human" with utter revulsion, not to say anger & fear, if you have women in the family; *the barbaric gang-rape of a young girl in Delhi.*

Much as I dislike to rake it up again but the case is so relevant in the context that I am writing about that it is impossible to give it a miss. Now, the word "*evolution*" literally means, *adapting to the current environment for survival*, & philosophically means, *going forward, overcoming our innate animalistic instincts, becoming more learned in order to facilitate a harmonious society & such traits are again, a tool for survival.*

But the occurrence of such horrific incidents time & again, challenge the philosophical aspect of the theory. The truth is, we are regressing. And for me, its not just the barbaric incidents such as these that amount to turning back the evolution clock & catering to our animalistic tendencies, it goes much beyond that. Every trait that has come to define us Indians as a society, tantamount to horrific crimes for, it is these very traits that are the cause for the crimes taking place so blatantly & I have identified these features as passivity, un-necessary aggression, blame-game, skepticism/cynicism, shirking responsibilities for our action/non-action, neglect of our duties as citizens & the list is endless...

And look at what these traits have resulted into? A very weak law & order AND a system with enough loop-holes for criminals to charter an escape route through..Its been a collective failure of the government & the society resulting in a complete break-down/absence of any sensible/reliable system.

Sigh...enough about evolution, what we really need now is "Revolution". A revolution in our leadership, our thought-process, our mindsets, our behavior, our laws. We must inter-change the places of things we are tolerant & intolerant about. We must be more empathetic & forgiving when someone passes us over making a scratch in our car but be absolutely intolerant when we see someone littering on the road or spitting & must laugh it off when someone twice looks in our direction & must boil in rage when we see anyone making a pass at a woman. The problem in our society right now that its all just the opposite.

Let us all be the facilitators of a change. For once, let us not be passive. After the "*Green Revolution*" & the "*French Revolution*", let us give the world a "*Revolution*" of a different kind.

Glimpse at Java Web Application—Part V

Qualitimes - Table Example 1

Employee Name	Employee Id
Prabhjot Singh Bal	1161
Sunil Goel	1171
Sarabjit Kaur Kahlon	1209
Gurmeet Singh	1243

Web Applications –HTML in Web Pages

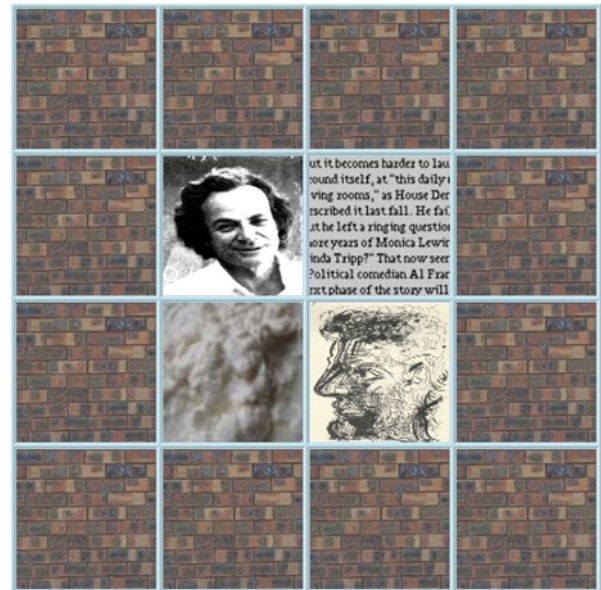

A SHORT COURSE IN HTML – PART TWO

As we became aware till now, Hypertext Markup Language (HTML) is used to provide the user interface for a web app user. Before we work with JSP and Servlets, we need to understand HTML constructs for working with tables, images, style sheets, forms and controls. We take a closer look at HTML tables and images in this issue.

In order to present tabular data the HTML 'Table Tag' is used to present data in rows and columns as shown in the first figure above. Enclosed within a table tag, we use the TR (table row) and TD (table data column) tags, to specify rows and columns respectively. The intersection of a row and column is known as a cell. Typically our HTML cell contains text, but they are capable of storing links, images, controls, and even other tables.

When we work with tables in HTML, we define certain attributes of the table which help the web browser to know how we want the table displayed. The most common ones are 'Border', 'CellSpacing', and 'CellPadding'. The attribute 'CellPadding' controls the space between a cell frame and its contents, while 'CellSpacing' controls the space left between two adjacent cells. Now, the nice part is that we can make a table cell span more than one row or column, basically to have cells that are groups of our basic table cells.

Qualitimes - Image Quilt Example

Though text and links are important cell contents, however our web experience also involves a lot of visual imagery. In HTML we use the 'Image tag' to display an image to the user. The most common image tag attributes we use are 'Src', 'Height', and 'Width' to specify the image source file, and sizing parameters. Many a times we need to use Image Editing tools along with HTML editors to work with images on HTML pages and they do make life a lot easier for a web developer.

In the second figure we present an example application of tables and images – an image quilt – used to present visual representations. Kindly do pay a visit to www.w3schools.com and go over the HTML Table and Image lessons.

With this issue we have gone over basic HTML tags, Tables, and Images. We will continue with Style Sheets next time. Remember, all code examples available upon request from qualitimes@qualitreeinc.com.

More next time..

Celebrating the arrival of 2013 with poses and in style!! Qualitimes wishes all a very happy and prosperous year ahead!

!! It's my B'day !!

Qualitimes wishes Subrat a very Happy B'day and many more great moments ahead!

LIFE BEFORE THE COMPUTER

- Memory was something that you lost with age
- An application was for employment
- A program was a TV show
- A cursor used profanity
 - A keyboard was a piano!
 - A web was a spider's home
 - A virus was the flu!
 - A CD was a bank account
- A hard drive was a long trip on the road
- A mouse pad was where a mouse lived
- And if you had a 3 1/2 inch floppy
... you just hoped nobody found out!

Answers to last month's Jumble:

- AMAZON
- CONGO
- VOLGA
- INDUS
- THAMES

Last Month's Winner:

Bharath R.

Other correct entries:

Shameem S Devraj K
Srikanth K Shashank S
Sarabjit K

Answers to last month's Word Puzzle:

- KICK
- IAMBI
- LYRICAL
- MISAIM
- IMPERII

Last month's winner:

Shameem S.

Other correct entries:

Devraj K Annavi K
Srikanth K
Sarabjit K

BUZZ OF THE MONTH

- Sunmeet Singh Sethi, the Chief Editor of Qualitimes, and Global Technical head of the company, was finally blessed by the lady luck and he got engaged with Baneet Anand on 15th January. Our congratulations to the couple and their families and fragrant and festive wishes for their future.
- Thick talks in progress with a social media company based out of New York to help streamline their overall testing processes.
- A healthcare safety and employee management company from the Ontario province in Canada shows interest in Qualitree's offshore testing services.
- After successful implementation performance test automation services, a utility company based out of Toronto engages Qualitree for the functional automation of their test suites.

Word Puzzle

In the following word puzzles, a word starts and ends with the same letter. Figure out the words and win*

1	_ UF _	
2	_ ULA _	
3	_ UDROO _	
4	_ APO _	
5	_ RUAN _	

* Send in your entries to "qualitimes@qualitreeinc.com" with the subject "Word Puzzle"

The first correct entry wins a gift of \$10.00
